## The decontamination puzzle

Dentaquip is delighted to be able to offer FREE Advice to ensure Dentists are Compliant with HTM 01-05

The regulatory regime for infection control in the dental profession is undergoing a period of rapid change following the release of the recent Department of Health document HTM 01-05.

Recognised as specialists in this field, Dentaquip provides the highest standards in disinfection and sterilisation equipment, organisation of required building work, design of premises with correct workflow and adherence to the proscribed standards.

We work closely with Dentists and Dental Staff to consider the application of the required standards of room design within existing established practices where the majority are likely to be single rooms to provide practical and effective Local Decontamination.

We also work closely with Dentists, Architects and Building Services contractors to design purpose built facilities within new practice projects, where the expectation is to achieve the best or 'Gold' standard of facility which will usually be a two room design with bespoke cabinetry and worktop design to accommodate the required equipment levels.

Such an approach, incorporating good design and forward planning

delivers installations with speed and efficiency ensuring a smooth transition of new or existing premises.

Validation is needed for new equipment at installation and annually thereafter which Dentaquip's manufacturer trained engineers undertake on a regular basis.

Please feel free to contact me anytime and I look forward to helping you through the 'decontamination solution'.

- Superior quality

**FREE**  
installation  
and training

# NICHROMINOX

Simple and effective transfer of instruments through the decontamination 'Flow-Process'.

- They allow you to store and arrange your instruments for most procedures.
- Made of stainless steel and silicone
- Minimises the need to handle instruments, significantly reducing the risk of needle stick injury to your staff
- Ideal for use in ultrasonic baths, thermo disinfectors and autoclaves.
- They can be placed in autoclave pouches or wrapped.

# NSK

## Care3 Plus Automatic Cleaning & Lubrication System

Correct maintenance performed at regular intervals is a key to high performance and longer life of your handpieces. NSK designed easy-to-use Care3 Plus to facilitate handpiece maintenance at your office. Care3 Plus automatically cleans and lubricates up to 3 handpieces (most Brands) at one time with a touch of button. Both high speed and low speed handpieces are processed thoroughly in a single 2-minute operation cycle
